**North Carolina State University**

Lauren is currently a 4th year veterinary student in her clinical year at NC State College of Veterinary Medicine. She became passionate about One Health while she was pursuing her Master's degree from Purdue University in Ecology and Evolution. Her training in conservation biology and animal behavior, made her understand the complexity and importance of human and animal health for conservation efforts. Lauren decided to apply to veterinary medicine with the goal of doing One Health research. Currently, she plans to work as a Lab Animal veterinarian for a human medical institution where she can do comparative medicine research. She is particularly interested in endocrine disruptors and applications for clinical pathology and surgical pathology in toxicology studies.

Over the course of her veterinary career, has been a leader in promoting One Health at NC State Veterinary School and the local medical schools (Duke University and University of North Carolina) by arranging seminars, public outreach events, and student networking opportunities. In 2013, Lauren established the Students for One Health facebook page, and since then has co-hosted two Students for One Health Webinars and the logo competition.
