

Chatham House Centre on Global Health Security

One Health Chatham House and Zoetis Collaboration

On-line meeting: Optimising Synergistic Collaborations – 22 Aug 2017

Dr Mirzet Sabirovic

**CHATHAM
HOUSE**
The Royal Institute of
International Affairs

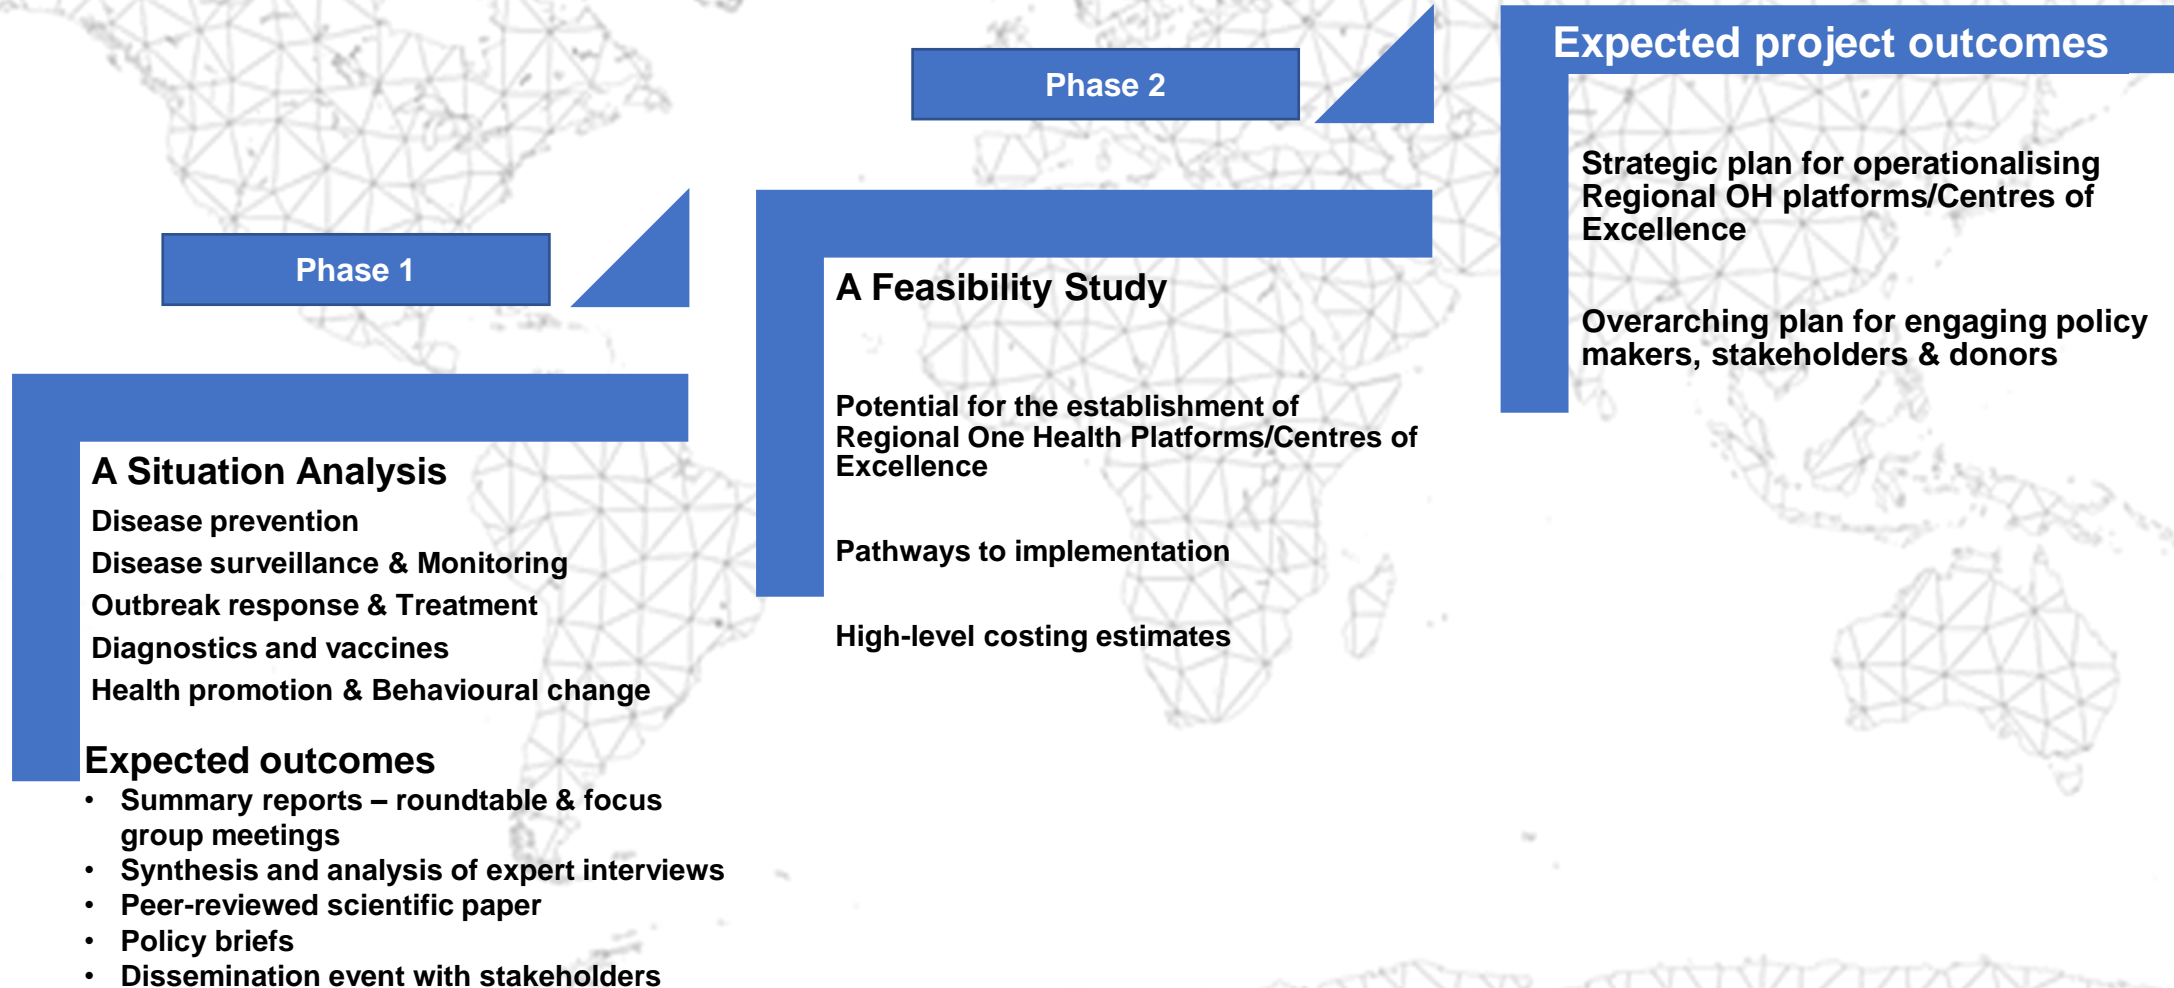

Analysing existing One Health Networks

- **Objective** – to identify One Health Networks operating at the global or regional (Europe, Africa, Asia) level & analyse strengths/gaps in their functioning
- **Methods** – systematic literature/internet search supplemented with expert interviews to comprehensively identify One Health Networks
- **Analysis** – Extraction of data about each network using a standardised template. Identification of gaps.

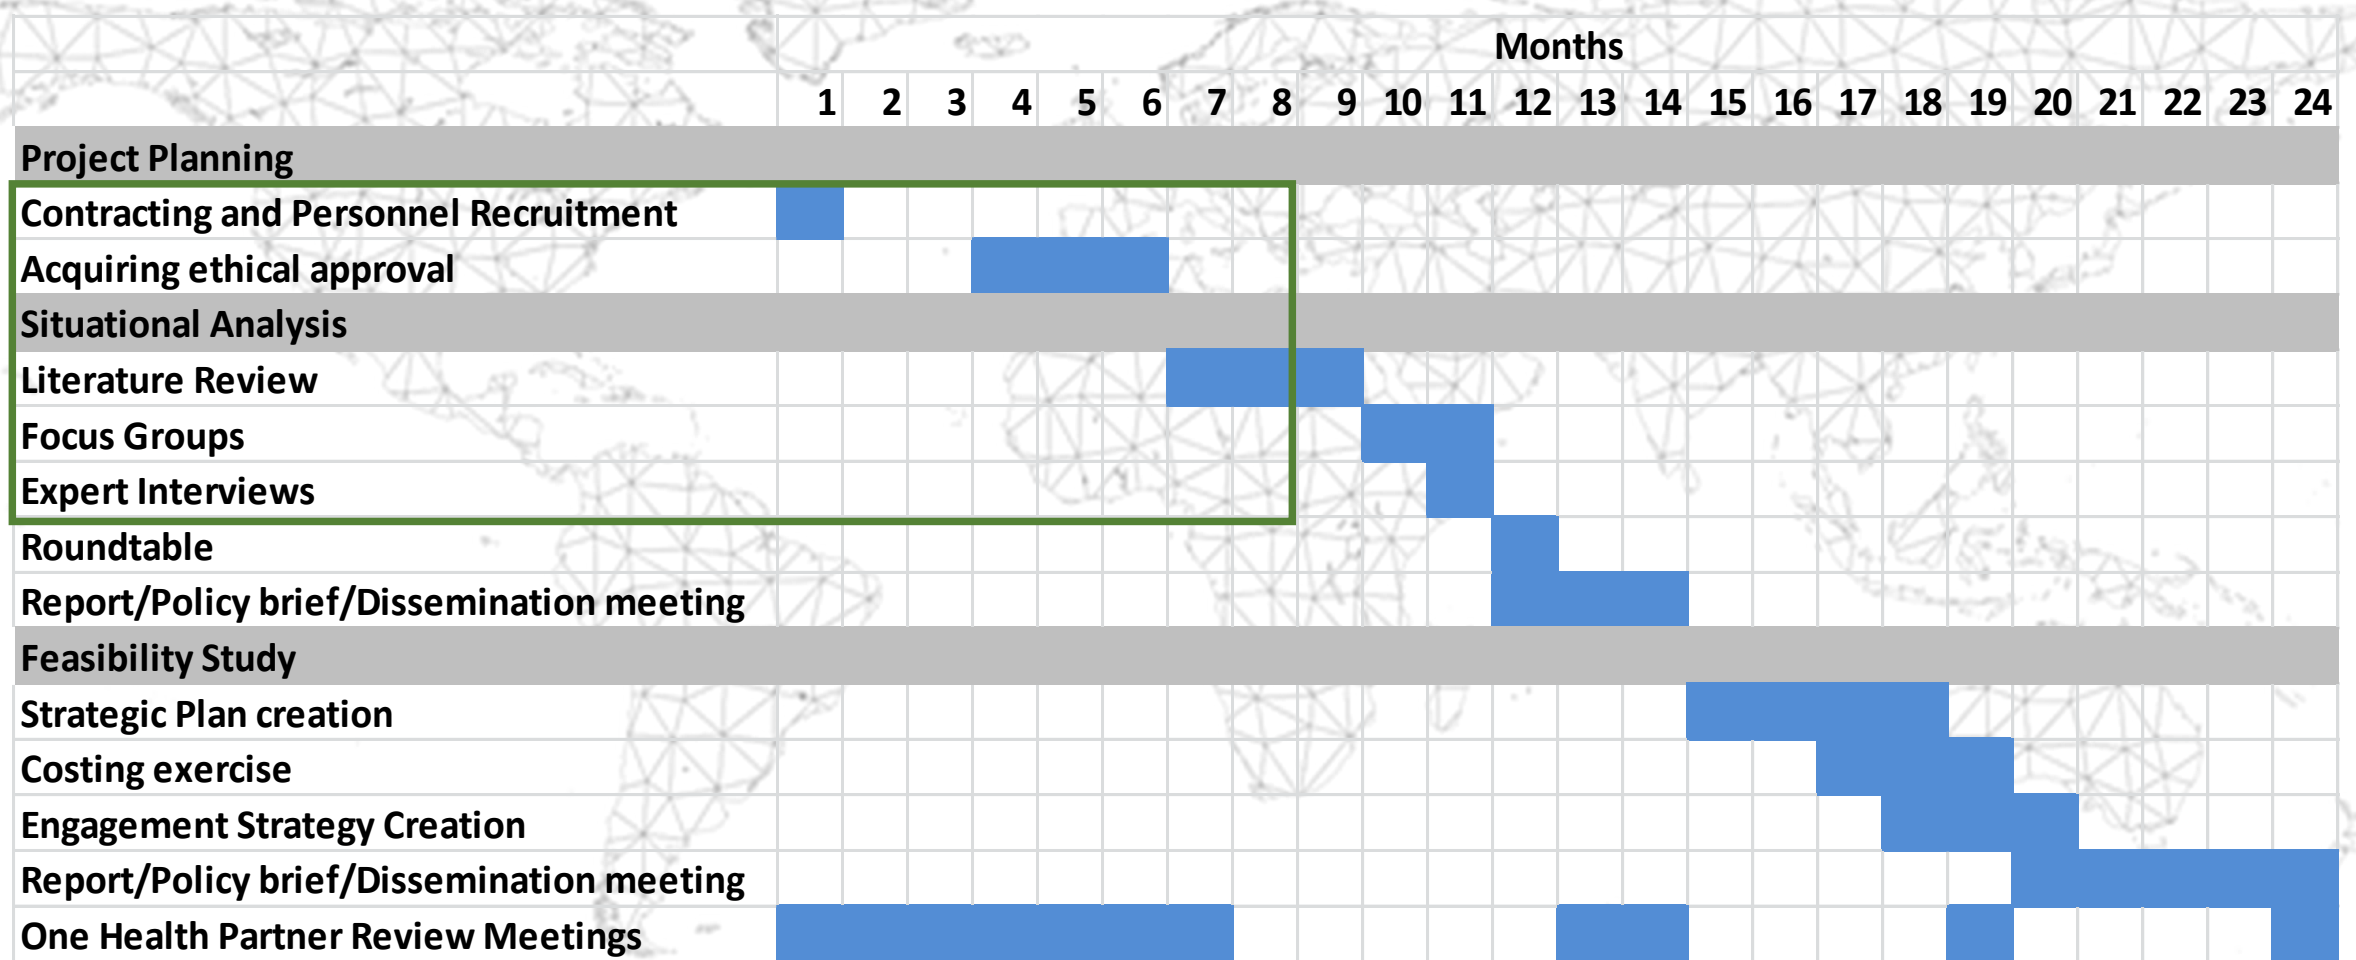

Summary of data to be analysed

Geographical location/scope	Europe / Asia / Africa / Global (other parts of the World)
Sectors involved	Human / Animal [Live animals – Food producing, Pets (Companion & exotic), Wildlife (Aquatic & Land/Air)] / Environment or Ecosystem [i.e. Climate, Water & Land, Structural change, Biodiversity]
Activities conducted by network	Surveillance & Monitoring / Disease Control / Risk management & Emergencies / Recovery / Research / Policy development / Advocacy / Capacity building / Communication / Data and information sharing / Disbursement of funds / Community engagement
Stakeholders engagement	Government / For-profit Private Sector / Academia / Communities / NGO & Civil Societies

Project Phases & Expected Outcomes

Tentative Project Timeline & Way forward (April 2017 – March 2019)

Challenges

- **One Health – globally/regionally/nationally there are many organisations/networks with direct and indirect international policy and operational interest in animal, public and environmental health.**
- **Limited knowledge and lack of comparative evidence on how theoretical One Health principles can (and should) be operationalised in practice**

Some ideas for strengthening collaboration among organisations

- **Development of feasible, evidence informed strategies for establishing and operationalising Regional One Health networks that adequately reflect regional and local conditions**
- **Regional One Health networks effectively and efficiently coordinated and collaborate with each other in:**
 - **Aligning and optimising roles and responsibilities - international and national policy, private sectors and other stakeholders (e.g. academia, research, NGOs/Civil Societies, community)**
 - **Ensuring sustainability:**
 - **Solving policy, legal and financial aspects & contributing to Sustainable Development Goals**
 - **Minimising potential for miscommunication and resistance to change to allow for open and diverse combination of skills and resources**
