2. Networking meet and greets
3. Collaboration with the One Health Leadership Experience
(<http://www.usask.ca/wcvm/ohle/>)
4. One Health case study challenge with faculty mentors
5. Resource and research exchange

Brief History of Your Organization's One Health Involvement

The One Health Club at the University of Saskatchewan initially formed after the first One Health Leadership experience held at the university in 2012. We are a diverse group of students at the University of Saskatchewan interested in collaborating for the health of our people, animals and environment – the One Health Initiative. Our activities and projects bring together students from different colleges in order to have inclusive collaboration. Our goals are as follows:

1. To educate the student body on the interdisciplinarity and the paradigm of One Health thinking.
2. To bring together diverse groups of students to gain insight into each other's fields, respect for each others' work, and opportunities to collaborate in order to solve complex global health problems.
3. To provide opportunities to build skills in communication, networking, problem-solving, and cooperation in order to continue to collaborate using One Health ideology into our careers.

Supporting Faculty

Dr. Doug Freeman, Dean, Western College of Veterinary Medicine

Dr. Vikram Misra, Western College of Veterinary Medicine
