

Jennifer Schmitz received her Bachelor of Science degree from Texas Tech University in 1996 and her MPH from Florida International University in 2013. The focus of her Masters report was One Health, specifically the association between companion and food animals and human health and the lack of education and knowledge among the general public, as well as public health professionals. While completing her undergraduate degree, she worked as a Veterinary Technician. She has served over 20 years, both active and as a reservist, in the United State Air Force. Upon completion of five years of active duty in the Air Force, she left to pursue a career in the Federal Government. She worked for the USDA for almost 14 years, gaining expertise in Animal Welfare and Health, as an Animal Care Inspector and a Compliance Specialist. After completion of her MPH, she decided to gain more experience in public health and accepted a position as an Environmental Protection Specialist with the Texas Department of State Health Services. Returning to the Federal Government, she is now a Regulatory Health Project Manager with the U. S. Food and Drug Administration.
