Link to informational web page: www.onehealth.fi

Seminars of similar concept and variable One Health themes will be arranged yearly.

8. Brief History of Your Organization's One Health Involvement

Finland has been lacking an interdisciplinary organization that provides a multi view aspect to health. One Health Finland stemmed from the enthusiasm and change drive of young academic health and environment professionals. The association was registered in September 2016 and the first seminar about health and daily environment was held in November 2016, with an overwhelming number of attendants. Simultaneously the number of association members has been growing. One Health Finland will continue sharing One Health -related information among professionals, stakeholders and public, currently by addressing theme seminars and being active in social media. Future aspects include interdisciplinary education, political collaboration, international conference attendance and consultation.
